SUPERSTORE SALES DATA VISUALIZATION

Project Report

Objective

To transform raw Superstore sales data into meaningful visualizations and identify business insights that support better decision-making.

Tools Used

- Python
- Pandas
- Matplotlib
- Seaborn
- Google Colab

1. Key Performance Indicators

- Total Sales: 2,297,200.86
- Total Profit: 286,397.02
- Highest Sales Month: November 2018
- Sales in Highest Month: 118,447.82
- Most Profitable Region: West

2. Key Findings

Sales by Category: Technology generated the highest sales at 836,154.03, followed by Furniture at 741,999.80 and Office Supplies at 719,047.03.

Profit by Region: West generated the highest profit at 108,418.45. East ranked second at 91,522.78, while Central recorded the lowest regional profit at 39,706.36.

Profit by Sub-Category: Tables recorded the largest loss of 17,725.48. Bookcases and Supplies also recorded negative profits.

Monthly Sales Trend: November 2018 recorded the highest monthly sales at 118,447.82.

3. Business Recommendations

1. Review pricing, discounts, and costs for loss-making sub-categories.
2. Monitor Technology demand and maintain appropriate inventory.
3. Investigate the factors contributing to lower profit in the Central region.
4. Use historical monthly sales trends to support inventory and demand planning.
5. Monitor profitability alongside sales revenue.

4. Conclusion

This project demonstrates how data visualization can transform raw sales data into useful business insights. The analysis identified high-performing product categories, regional profit differences, monthly sales patterns, and loss-making sub-categories. These findings can support improved inventory planning, pricing decisions, and business performance monitoring.

Project Status: Data visualization and business insights completed.
